                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cyclophilin ligand (CAML)-interactor) forms a complex with neutrokine alpha polypeptide (TACI-Ligand). The antagonist or agonist of TACI/TACI-L complex is useful for modulating an intracellular signalling cascade mediated by TACI/TACI-L complex. Antagonists of TACI/TACI-L complex are used to inhibit the interaction between TACI and TACI-L for therapeutic purposes to treat tumour and tumour metastasis and to combat various autoimmune diseases e.g. multiple sclerosis and diabetes, as well as other disorders, such as viral infection, rheumatoid arthritis, graft rejection, and immunoglobulin (19) E-mediated allergic reactions and inflammation. The interaction is used to study cellular processes regulation, cell proliferation, cell death and inflammatory responses. The interaction between the extracellular region of TACI and TACI-L can be used to further develop understanding of which cell types TACI-L can

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the human transmembrane activator CAML interactor protein (TACI). The invention relates to treating a mammal for a condition associated with undesired cell proliferation (e.g. a solid tumour, or reducing the size of a solid tumour located on or in a mammal comprising administering a transmembrane activator CAML interactor protein (TACI) reagent. The TACI reagent has cytostatic and vulnerary activity. Treating a mammal (e.g. human, cow, horse, dog, mouse, rat or cat) for a condition associated with undesired cell proliferation (e.g. cancer such as renal cell cancer, Kaposi's sarcoma, breast cancer, cancer, bladder cancer, mastrocytoma, lung cancer, mammary adenocarcinoma, pharyngeal squamous cell carcinoma, gastrointestinal cancer or stomach cancer). The method is also useful for treating cellular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hyperproliferation (hyperplasia) such as scleroderma, pannus formation rheumatoid arthritis, post-surgical scarring and lung, liver and uterin fibrosis. The TACI reagent of the invention can extend mean survival ti of a mammal by 25% as compared to the mean survival time of a mammal in the absence of administering the TACI reagent. The TACI reagent also reduces the size of the tumour by 25% or more

The proteins are also useful as a vaccine adjuvant that enhances immune responsiveness to specific antigens. The present sequence for human transmembrane activator and CAML interactor (TACI) immunoglobulin G (IgG) Fc fusion protein is used in the examples of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of human tumour necrosis factor (TNF) delta and TNF epsilon proteins, and the polynucleotide sequences encoding them. The proteins are useful for modulating immunoglobulin production or for modulating proliferation of B-cells. The sequences of the invention are useful for treating diseases or disorders of the immune system. Such disorders include autoimmune diseases (e.g. systemic lugus erythematosus (SLE), acquired immunodeficiency syndrome (AIDS), cancers of the immune system (e.g. chronic lymphocytic leukaemia (CLL), multiple myeloma, non-Hodgkin's lymphoma or Hodgkin's disease), lymphoproliferative disorders, microbial infections (e.g. viral, bacterial), parasitic infections, nephritis, bone disease (e.g. osteoporosis), atherosclerosis, pain, cardiovascular disorders (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         16-MAR-2001;

BCMA and TACI binding antibody compositions are useful for inhibiting proliferation of tumour cells, particularly inhibiting ZTNF4 activity in a mammal associated with increased endogenous antibody production or a disorder consisting of neoplasm, chronic lymphocytic leukaemia, multiple myeloma, non-Hodgkin's lymphoma, post-transplantation lymphoproliferative disease or light chain gammopathy or inflammation e.g. asthma. The invention is also useful in gene therapy. The present is

Composition, useful for identifying modulator of receptor for treating asthma and glomerulonephritis, comprises AGP-3 (tumor necrosis factor ligand family member) receptor and encoding nucleic acids.

Disclosure; Page 117-119; 124pp; English.

CC related to AGD-TR-related protein and for identifying compounds (agonists)

CC or antagonists) that interact with AGD-TR proteins. (II) is also useful

CC for identifying intracellular proteins that interact with the respective

CC cytoplasmic domains by yeast two-hybrid screening process. (II) is

CC involved in B cell growth, survival and activation particularly in lymph

CC incert diseases (II) are used for modulating B cell response and are

CC used to treat diseases characterised by inflammatory processes or

CC deregulated immune response such as rheumatoid arthritis, graft-versus
CC not disease, Crohn's disease, lupus, etc. (II) is also useful in the

CC production of hybridoma cells which are derived from B cells, which

CC involves treating the hybridoma cells with (II). (II) is useful in the

CC cuseful for treating acute pancreatitis, anyotrophic lateral sclerosis

CC (ALS), Alzheimer's disease, asthma, atherosclerosis, cachexia/anorexia,

CC ischaemic injury including cerebral ischaemia, multiple myeloma, multiple

CC septic shock, etc. The nucleic acids are also useful for developing

CC transgenic animals expressing (II), which are useful for developing

CC related more in represents the amino acid sequence of human AGP-3 (tumour necrosis factor ligand family member) related protein (II) attached to a vehicle protein. (I) is useful for modulating AGP-3-relate activity in mesenteric lymph nodes (MLN) of a mammal. (II) is useful in assays to identify cells and tissues that express AGP-3R or proteins The invention relates to a composition (I) comprising AGP-3 receptor (tumour necrosis factor ligand family member) related protein (II) AGP-3-related

               protein (BCMA) activity in a mammal. The method comprises administering specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, the protection of the content of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                   The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation
                                                                                                                                                                                                                                                                                                                                   Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a binding partner for APRIL, a tumor necrosis factor far
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cytostatic; B cell maturation protein; BCMA; tumour necrosis factor; TNF; lymphoproliferative disorder; tumour; lung; gastrointestinal; pancreatic; prostate; inflammation; immune disorder; diarrhoea; psoriasis; colitis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     rheumatic heart disease; polyendocrinopathy; diabetes mellitus; neuritis; autoimmune pulmonary inflammation; multiple sclerosis; asthma; hepatitis; cirrhosis; Sjogren's syndrome; rheumatoid arthritis; restenosis; AIDS; autoimmune thyroiditis; reticular dysgenesis; ataxia-telangiectasia; autoimmune thyroiditis; reticular dysgenesis; ataxia-telangiectasia; systemic lupus erythematosus; B cell lymphoproliferative disorder; skappa chain deficiency; short limbed dwarfism; Crohn's disease; sepsis;
The invention relates to a tumour necrosis factor (TNF) recept, polypeptide, TR17, and the polymucleotide encoding it. The polyand polynucleotide are used for treating an immunodeficiency on autoimmune condition. The disorders include haemolytic anaemia dermatitis, myocarditis, glomerulonephritis, allergic encephalo

The polypeptide is also useful for increasing or inhibiting B-cell proliferation and immunoglobulin production and for killing a cell that expresses the TR17 polypeptide on its cell surface.
Transmembrane activator and calcium modulator and cyclophilin ligand-
interactor (TACI)-immunoglobulin fusion protein, for treating cancer
diabetes, comprises a TACI receptor group and an immunoglobulin group

                                                           The invention relates to a novel antibody or its fragment, which immunospecifically binds tumour necrosis factor Delta (TWF-delta/APRIL). The antibody of the invention has dermatological, immunosuppressive, antianaemic, antianaemic,
                                                                                                                                                                                                   Novel isolated antibody that immunospecifically binds tumor necrosis factor delta, useful for treating, preventing or ameliorating Non-Hodgkin's lymphoma, multiple myeloma, rheumatoid arthritis or Sjogren's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              activator and calcium modulator and cyclophilin ligand-interactor (TACI) receptor group that binds tumour necrosis factor-like protein (ZTNF)2 or ZTNF4; and an immunoglobulin group comprising a constant region of an immunoglobulin. The invention is used to manufacture a medicament for inhibiting the proliferation of tumour cells in a mammalian subject. The composition comprising the fusion protein may also be used in treating autoimmune diseases (e.g. systemic lupus erythematosus, multiple solerosis, diabetes mellitus, rheumatoid arthritis and asthma), renal diseases (e.g. glomerulonephritis) bronchitis, inflammation, graft rejection, anaemia and septic shock. The fusion proteins are also used in
                                                                                                                                                Disclosure; Page 220-221; 225pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ameliorating cancer such as Non-Hodgkin's lymphoma or multiple myeloma in human, disease or disorder such as autoimmune disease, and graft versus host disease (GVHD). The autoimmune disease is systemic lupus erythematosus, rheumatoid arthritis or Sjogren's syndrome. The antibody is useful for detecting, diagnosing, prognosing, treating, preventing or ameliorating a disease or disorder associated with aberrant APRIL or APRIL receptor expression or aberrant function of APRIL or APRIL receptor. The disease or disorders includes autoimmune and inflammatory disorders such as autoimmune neutropenia, haemolytic anaemia, dermatitis, asthma, allergic encephalomyelitis, myocarditis, multiple sclerosis, uveitis, tuberculosis, diabetes mellitus, psoriasis, cancer of the immune system, particularly B cell cancers, immune disorders such as myasthenia gravis, Hashimoto's disease, immunodeficiency syndrome, Bruton's disease, infectious diseases (e.g. acquired immunodeficiency syndrome (AIDS)), and proliferative disorders (e.g. acquired immunodeficiency syndrome (AIDS)), and proliferative disorders (e.g. acquired immunodeficiency syndrome (AIDS)), and proliferative disorders (e.g. acquired immunodeficiency syndrome (AIDS)).
                                                                                             The present sequence represents a human TACI polypeptide. The specification also describes BR3 polypeptides. TACI and BR3 are receptors. Tumour necrosis factor (TNF) family ligands TALL-1 and April bind to the TACI receptor, while TNF family ligands TALL-1 also binds to BR3 receptor. The TACI and BR3 receptor nucleic acid is useful for

The invention relates to agonist or antagonist of DITACIN useful in the treatment of metabolic disorders. The antagonist or agonist of DITACIN or the composition comprising the agonist or antagonist, is useful for treating or preventing obsestly-related diseases, e.g. hyperlipidaemia, atherosclerosis, insulin resistance, diabetes, stroke or hypertension. The agonist is useful for reducing body mass and maintaining weight loss by: lowering circulating levels or concentrations of free fatty acids, completely loss and/or triglycerides; stimulating muscle lipid or free fatty acid oxidation; increasing leptin uptake in a liver cell; reducing the postprandial increase in plasma feature fatty acids or triglycerides, comparticularly following a high fat meal; reducing or eliminating ketone body production, particularly following a high fat meal; increasing glucose uptake in skeletal muscle cells, adipose cells, neuronal cells, ced blood cells or brain; reducing or preventing the postprandial increase in plasma glucose following a high carbohydrate meal; or improving insulin sensitivity. The antagonist of DITACIN activity is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1;
```

The invention relates to human tumour necrosis factor (TNF) polypeptides and the polynucleotides encoding them. The sequences of the invention are useful in research, biological, clinical and therapeutic purposes. In particular, these are used in diagnosing, preventing, treating or ameliorating dysfunctions or diseases associated with aberrant endogenous

The sequences may also be used for chromosome identification or genetic mapping. This sequence represents a human TNF-related polypeptide of the invention.
                           The invention relates to an isolated nucleic acid molecule consisting of a sequence that is at least 90% identical to a sequence encoding Human tumour necrosis factor receptor (TR20) polypeptide (appearing as ADF77377) or its fragments, complement, and optionally a heterologous nucleic acid sequence that is preferentially expressed in mature B cells. Also included are a method of making a recombinant vector by inserting the mucleic acid molecule into a vector, a recombinant vector produced by the method, a method of making a recombinant host cell by introducing the recombinant vector into a cell, a recombinant host cell produced by the method and a recombinant method of producing a polypeptide by culturing the recombinant host cell under conditions where the polypeptide is expressed and recovering the polypeptide. The nucleic acid molecules are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   graft rejection;

                                                                                                                                                                                                  The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (ii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CAP. Note: This patent is an equivalent to basic patent US2002182586A1, for which no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              upregulated cell proliferation, or inhibition of apoptosis, e.g. cancer, autoimmune diseases, viral infections, inflammation, graft-versus-host disease, acute graft rejection, chronic graft rejection, AIDS, neurodegenerative disorders, myelodysplastic syndromes, ischaemic injury, toxin-induced liver disease, septic shock, cachexia, and anorexia. The present sequence represents human tumour necrosis factor receptor TACI, included for comparison with TR20.
                                                                                                                       Sequence 293 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                  sequence data was published
